Lean Canvas | FoodLoop AI

Agentic AI food-rescue coordinator that moves surplus cooked food to people who need it | SDG 2: Zero Hunger

IBM SkillsBuild Masterclass 5 | Your Name

1 PROBLEM

- **Food is wasted while people go hungry:** restaurants, caterers, wedding halls and hostel messes end the day with good cooked food and no one to give it to.
- **Time and logistics:** cooked food is safe for only a few hours, and matching a donor, an NGO and a driver by phone is too slow.
- **No trust and no tracking:** donors worry about food safety and liability, and nobody measures how many meals were saved.

EXISTING ALTERNATIVES

- Phone calls and WhatsApp groups
- Food-rescue NGOs and volunteer networks (limited hours and cities)
- Do nothing: throw the food away

4 SOLUTION

- **Donor Agent:** reads a WhatsApp message or photo and lists the food, quantity and safe-until time.
- **Matcher Agent:** picks the best NGO or shelter by need, distance, capacity and time left.
- **Logistics Agent:** assigns a volunteer or driver and a pickup slot.
- **Safety and Impact Agent:** food-safety checks, delivery proof and meals-saved reports.

8 KEY METRICS

- Meals rescued per month
- Listing-to-pickup time
- Pickup success rate
- Active donors and NGOs
- Repeat-donor rate
- Cost per meal rescued

3 VALUE PROPOSITION

- **Rescue surplus food with one WhatsApp message.**
- Tell us what is left and where. FoodLoop finds the right NGO, books the pickup and proves the meals were delivered, before the food spoils.

HIGH-LEVEL CONCEPT

Uber for surplus food, run by AI agents, for NGOs

5 UNFAIR ADVANTAGE

- Agents that match and dispatch inside the food-safe time window.
- Network of NGOs, volunteers and NSS units that grows with every pickup.
- WhatsApp-first, local-language access.
- Impact data for CSR and ESG reports.
- SDG 2 and SDG 12 alignment attracts CSR and government support.

9 CHANNELS

- WhatsApp bot, web dashboard, SMS fallback
- Restaurant and caterer associations
- College NSS units and student volunteers
- NGO networks, LinkedIn, Instagram

2 CUSTOMER SEGMENTS

- **Donors:** restaurants, caterers, wedding venues, hostel and college canteens, corporate cafeterias.
- **Receivers (free):** NGOs, community kitchens, shelters, old-age homes, orphanages.
- **Payers:** corporates (CSR), large caterers, colleges, municipal bodies.

EARLY ADOPTERS

- Hostel messes and canteens in one Tier-2 city
- NSS units and student volunteers
- Local NGOs that already run pickups

7 COST STRUCTURE

- LLM API usage and cloud hosting
- Maps and routing API, WhatsApp Business API and SMS
- Engineering, AI and UI/UX team
- Volunteer coordination and operations
- Food-safety training and insurance
- Marketing and campus ambassadors

6 REVENUE STREAMS

- Freemium: free listing and matching for small donors; NGOs always free
- Subscription for restaurant chains and caterers
- Corporate and CSR sponsorship per meal rescued
- Impact and ESG reports for companies
- College licences and municipal or government contracts
